

## NEWS ANNOUNCEMENT

### Model ATU Turbine Vibrators Better Than OSHA Standards

For more information contact Sue Griffith at 800-262-2106 or [sue@cougarindustries.com](mailto:sue@cougarindustries.com)

Peru, IL – Cougar Industries, Inc. is pleased to announce that its Model ATU line of turbine style industrial vibrators operate with a low noise level of 62-78dBA, well below OSHA standards. The Model ATU can be provided to deliver over 1800 force pounds to solve your material flow problem. The ATU requires no lubrication and comes with a durable anodized aluminum finish, a 350° F temperature rating and has excellent power-to-weight ratio, and lower air consumption than comparable pneumatic vibrators.

Because of their ultra-low noise and high degree of application reliability, the Model ATU is ideal for inside plant environments or anywhere that you want a low-noise solution to your material flow problem. Applications are varied and include food processing, parts feeding in racks and trays within the automotive industry, chemical and plastic processing, foundries and many more applications. Industrial vibrators are commonly used to promote and maintain the flow and discharge of powder and bulk materials from bins, silos and other storage vessels, as well as to aid the movement of material in other applications and to assist in the ejection of cast products from molds.

Cougar Industries, Inc. has been providing material flow-aids for decades and offer cost-effective solutions, expert technical assistance and complete service and support. For more information please contact us at 800-262-2106, email us at [cougar@cougarindustries.com](mailto:cougar@cougarindustries.com) or visit our website at [www.cougarindustries.com](http://www.cougarindustries.com)
